It then finds the largest prime number within that range. For example: Enter the starting number: 5 Enter the end number: 10 The largest prime number within this range is 7. No code is necessary. I just need some ideas. Thanks. A: Prime numbers are defined as being divisible only by 1 and themselves, so you can search for each prime number between your lower and upper bounds and print the one which is the largest. This is the code that I came up with: public class Prime1 { public static void main(String[] args) { Scanner input = new Scanner(System.in);
