mixvibes pro 5 full version downloadinstmank  
mixvibes pro 5 full version

downloadinstmankQ: Unique.js showing  
duplicate results I'm having an issue with the  
unique.js plugin for jQuery. For some reason  
it's not working as expected. Here's a jsFiddle:  
Here's a snippet of the code:

```
$(".a").each(function() { var id =  
$(this).attr("id"); if(uniqueVal == id){  
$("#"+id).attr("selected",true); } });
```

The idea is  
to go through the .a elements, and check the id  
attribute. If the current value of the id attribute  
is unique, then change the CSS class of that  
element to selected. When I run this code, it

---

gives me each of the .a elements multiple times with the selected class. I know that the plugin has a limit of 10 items in the results. So, I'm not sure why it's giving me more than 10. Can anyone see what I'm doing wrong? A: In fact, if you take a look at the unique.js source code, you'll see that the problem comes from this line: `break; // don't check against this val again`. This means that unique.js will keep working on the same element until it finds a value different from the previous one. It will then add this value to the list of unique values, so you'll get a lot of duplicate results. If you don't want to use this plugin, you can still solve your problem

---

using pure jQuery. In this case, you would iterate through all the elements instead of using a jQuery.each(). However, you would need to loop through the children of the .a elements. You could then create your own sort function that will tell you which element comes first and which one comes last. This is what the final code would look like: \$(".a").each(function() { var id = \$(this).attr("id"); var index = uniqueId.indexOf(id); if(index == -1){ \$("
