This is not a modified version of DayZ. [44fV2S7z+z4] DayZ Standalone 0.61 Multiplayer REPACK DankDayZ With Lucky Patcher [44fV2S7z+z4] DayZ Standalone 0.61 Multiplayer REPACK DankDayZ With Lucky Patcher I have seen people have problems on the DuniaServer when installing the patch. If that is the case for you, theres a good chance that you might be able to fix it if you install it like this: Go to where you unzipped the game to, and locate the folder named

DayZ_Installer_Win_1.00_11.12. Now simply copy that folder to the root of your game folder. That should do it. If you encounter any trouble, just let me know in the comments and I'll try to help. Can someone help me please. I really want to play this on my Mac, but in the site it says that I need java. Can I just download it, what do I need to do after that? I need to download it from a website. I don't know what I need to download. thx can someone please help me. i tried to make it work it told me that it requires java but there is no java in my system. also the downloads and software i am downloading from are on a web browser so i cannot just download them. i tried to just download java but it is not on my system and they don't have the download file. does anybody know what i should download and how to do it please. Can someone help me please. I tried to make it work it told me that it requires java but there is no java in my system. also the downloads and software i am downloading from are on a web browser so i cannot just download them. i tried to just download java but it is not on my system and they don't have the download file. does anybody know what i should download and how to do it please. I have the same issue. I can open the site on my Windows PC and see the java files and when i click on them it says that my Java is out of date and needs updating.
