Add auto-generated information in your design without manual rekeying. AutoCAD can now incorporate a variety of information into your drawings automatically from PDFs and PowerPoint documents, depending on the types of markup stored in the PDF or the document. (video: 2:21 min.) One-touch markup help: Create the desired result by selecting the desired option (circle, square, polygon, line, polyline) and pressing a single key. You can now access many more drawing commands that will then work automatically with the selected option (video: 1:42 min.) Insert shapes from the keyboard: Insert shapes with a single keystroke by pressing the "*" (star) key and selecting the shape types (circle, square, polygon, line, polyline) that you want. (video: 1:13 min.) Save geometry with click-and-drag: Use the click-and-drag tool (line) to make edits to your geometry without the need to create objects first, for example to insert a gap, or to create a duplicate line, or to select a segment of the line. These changes are then automatically saved, so that you don't have to save the file. (video: 1:54 min.) Symmetry: Make it easier to create symmetrical shapes without the need to create the original shape and duplicate it. You can now insert a symmetrical shape (face, cube, pyramid, cylinder, cone, or box) by simply holding the 'Shift' key and selecting the type of symmetry that you want. (video: 2:16 min.) New navigation and insertion tools: Use the tools of 'Point', 'Rectangle', 'Circle', 'Polyline', 'Square', 'Polygon', 'Line', 'Polygon', and 'Ellipse' on the keyboard for easier navigation and precision in the drawing area. In addition, these tools now have a more intuitive geometry button to guide you as you draw. (video: 2:15 min.) New snapping options: Choose from four new snapping options for aligning objects in your design automatically. You can now automatically snap to the nearest vertices of objects, and to the vertices
