RandomLib Crack Free

===================== - is included in the CMake package for 2.8+ (version 3.6 of the CMake package is required) - has been tested with Linux/64, Linux/32, Windows, MacOS - has been tested using gcc 3.4.x, gcc 4.1.x, g++ 3.3.x, g++ 4.0.x - allows you to generate: - uniform random integers between 0 and a given bound - random-normal integers with a given mean and standard deviation - random-Poisson integers with a given mean and standard deviation - uniform random real numbers between 0 and 1 - random-normal real numbers with a given mean and standard deviation - random-Poisson real numbers with a given mean and standard deviation - mt19937 sequences of integers - mt19937 sequences of double precision floating-point numbers - can be used both from the command line and from a C++ program - is highly portable: it has been tested under Linux/64, Linux/32, Windows, MacOS - is optimized for vectorization of floating point numbers using SIMD extensions (SSE) - has a boolean flag that allows you to disable double precision output if you don't want it - contains many different tests, some of them involve multiple generators of sequences, use --benchmark if you want to run them and take a look at the results RandomLib Review: ================= The random_generator package includes a C++ interface to the standard Mersenne Twister generator of the C standard library. The following section describes the interface to the Mersenne Twister generator. Overview of the C++ interface ----------------------------- The generated sequence is an array of doubles of size 624. This means that for each call to generate(), you will have access to the 624 doubles representing the sequence of random numbers. Interface to the Mersenne Twister Generator --- The following table contains the functions and classes available for accessing to the random_generator. |Function|Return type|Description| |--- | --- | --- 6a5afdab4c

RandomLib [32|64bit]

+ README: document the API. + Examples: a brief tutorial for its usage. + It includes a library (libtutorial.so) to install a set of examples with RandomLib. + It includes a command-line tool (randomlib.exe) to generate random integers, real numbers and lists of integers and real numbers. + It includes a visual wizard (RandomLibWizard.exe) to create a table of integers and real numbers (augmented by a rectangle) and a list of items (also with a rectangle). + It includes a library to instantiate RandomLib. : demo/RandomLib.exe: RandomLibWizard example. + Demo/RandomLib.exe generates and displays a table of integers and real numbers, a list of integers and real numbers, and a list of items (a rectangle with a background color, text and a rectangle). + demo/RandomLib.exe + --help: Display list of options. : demo/RandomLib.exe + --help: Displays list of options. + demo/RandomLib.exe + r: Generates random integers and real numbers. + demo/RandomLib.exe + n: Generates random integers. + demo/RandomLib.exe + N: Generates random integers in the range [0, N). + demo/RandomLib.exe + m: Generates random real numbers. + demo/RandomLib.exe + M: Generates random real numbers in the range [0, M). + demo/RandomLib.exe + i: Generates random lists of integers. + demo/RandomLib.exe + I: Generates random lists of integers in the range [0, I). + demo/RandomLib.exe + l: Generates random lists of integers. + demo/RandomLib.exe + L: Generates random lists of integers in the range [0, L). + demo/RandomLib.exe + s: Generates random lists of integers. + demo/RandomLib.exe + S: Generates random lists of integers in the range [0, S). + demo/RandomLib.exe + b: Generates random lists of integers. + demo/RandomLib.exe + B: Generates random lists of integers in the range [0, B). + demo/RandomLib.exe + a: Generates random lists of integers

What's New in the RandomLib?

------------- RandomLib is a C++ interface to the Mersenne Twister random number generator MT19937 and to the SIMD-oriented Fast Mersenne Twister random number generator SFMT19937. This application allows you to generate random integers and real numbers at high decimal precision. To load the library, you must go to the menu System/Load Library... and load the file RandomLib.lib. New in this release: -------------------- - FT2 implementation as a template - Faster C++11 code based on vectorization - Faster C++98 implementation with ParallelLoop - ParallelLoop is an alternative to the C-based ParallelLoop for parallelization (OpenMP, OpenACC, etc) - Several better C++11 random number generators are integrated: Yarrow, FNV → Luhn, Xorb → Karatsuba → Yoshida → Pease - Improved uniformity at high precision (better than 0.001% in many cases) - Improved random number distributions - Better RNG performance with graphical user interface (no console) - License under LGPL 3 Changes in this release: ----------------------- - Changed RNG algorithms in C++11 to use inbuilt parallel loops for parallelization: XorShift and Karatsuba multipliers. - Local optimisations: vectorization of the random number distribution of the SFMT and the RandomLib. - General optimisations: Significant improvement in efficiency, reliability and performance. - Two random number generators have been integrated in the library (the SFMT using the LFSR in XorShift mode, and the Realistic parameterized distributions using C++11 random number generators): Xorb, Yoshida, Luhn, Pease, Karatsuba and Yarrow. - Several improvements in the RNG generator performance for SFMT based on vectorization of a (long) loop. - Improved uniformity at high precision (better than 0.001% in many cases) - Changed to class ostream& operator

System Requirements:

OS: Windows 7 and above Processor: Dual Core 1.5 GHz or higher Memory: 2 GB RAM Graphics: DirectX 11 support Hard Disk: 1 GB free space Sound Card: DirectX 9.0 compatible sound card Internet connection: Broadband internet connection Game Disk: 9.6 GB Recommended System Requirements: Hard
