You can get more details... »The G-protein coupled receptor RON2 is a putative target for mutation and loss in human cancer. RON2 is a member of the family of receptors for the bombesin-like peptide receptors. It is preferentially expressed in epithelial cells and shows a restricted tissue distribution, both in terms of cell type and organ, suggesting its involvement in specific processes. RON2 is mutated in human cancer. Point mutations resulting in loss of function were found in a panel of gastrointestinal (25%), lung (20%) and breast (13%) carcinomas, with 11 of the 14 mutations resulting in truncations of the receptor. Mutations at the 5'-end of the receptor were found in >50% of breast, gastrointestinal and colorectal carcinomas, indicating a possible tumour-suppressor role of RON2. The inhibitory effect of bombesin on gastric and pancreatic cell growth is limited by the presence of bombesin-like peptides, but can be mimicked by activation of the G-protein coupled receptor RON2. Thus, RON2 appears to be a molecular target for tumour growth and, as RON2 is restricted in its expression to epithelial cells, it may also function as a tumour suppressor in epithelial cancers. A series of photos of the Rev. Clementa Pinckney and Rev. DePayne Middleton-Doctor before and after the attack on the Emanuel AME Church in Charleston, S.C. (The Washington Post) The Rev. Clementa C. Pinckney's mother has passed away. She was 87 years old. "She's having a good time," said Gloria Johnson, the woman's daughter, who was being accompanied by her three children and five grandchildren on a trip with Pinckney and his mother to their daughter's home in New York.
