AutoCAD 2018 is available for Windows, macOS, and Linux, and is a cross-platform product. It is a commercial and technical powerhouse. The free AutoCAD LT app is built on the same code base, and adds some features that allow it to run on lower-end computers. For all of its power, AutoCAD can be a confusing program. But with these tips, you can navigate AutoCAD with ease. 1. Using Keyboards & Touch Screens To use AutoCAD like a traditional desktop app, you need to understand how the program works, how it can be accessed, and how commands work in AutoCAD. Because AutoCAD is designed for touchscreens, it's easier to use them instead of a keyboard and mouse. You can touch the screen to interact with objects and commands, but you can also use a touchscreen as a drawing pad. Using a touchpad is less efficient than a touchscreen, but it's easy and a practical option. 2. AutoCAD has Two Modes of Operation AutoCAD is designed for working on a touchscreen. The program can be divided into two sections: the drawing area and the toolbars. The drawing area contains the objects you are working with. The toolbars contain the objects you use to draw and design, and the commands you use to manipulate the drawing area. When you draw an object, the object is displayed in the drawing area. When you zoom in and out of the drawing area, the zoomed area is displayed in the drawing area. The size of the drawing area varies by application and by the screen resolution on your computer. You can click or tap the screen to access the drawing area. The drawing area is a combination of a drawing window and an annotation window. 3. Toolbars contain Commands You can access AutoCAD's toolbars by clicking on any button or icon. To access the toolbars, follow these steps: Start the application and open the drawing area. Select a tool from the toolbars (or one of the buttons in the drawing area). Type or press a key. Repeat as needed. AutoCAD offers many toolbars. The most important of these are the View and the Tools toolbars. The View toolbar contains the View buttons, the Panorama button, and the Zoom buttons. The Tools toolbar contains the Object, Modify, Properties, and Help and Reference buttons.

The effect of dietary Eimeria tenella infection on the rate of appearance of endogenous immune cells in the intestine of laying hens. The purpose of this study was to investigate the effect of early Eimeria tenella infection on the rate of appearance of endogenous immune cells in the duodenum and jejunum. Infected and control groups (n = 6) were each inoculated twice at weekly intervals (at day 35 and 36) with 10(6) sporulated E. tenella oocysts. The infected and control groups were slaughtered after 5, 10, 15, or 20 days postinoculation (p.i.) and the number of endogenous immune cells (NEC) were determined in the duodenum and jejunum. The rate of appearance of NEC was estimated by calculating the derivative of the NEC with respect to time curve. A decline in NEC in the duodenum and jejunum occurred with time for both infected and control groups, although there was an earlier onset of the decline for the infected group compared with controls. In the duodenum, this decline was characterized by the appearance of B cells, T cells, and monocytes in both groups. In the jejunum, the decline was characterized by the appearance of B cells, T cells, and NK cells.
