Password Safe provides protection against one of the most common and dangerous computer security threats: forgetting your passwords. The secure password storage in Password Safe allows you to remember fewer (but very strong) passwords, and will make your web site login process much easier. The Password Safe main window contains a list of your saved passwords. Simply click on the "New" button to add a new password. A list of all the users currently logged into the web site will be shown, and you can select from the list, or enter a new user. To see if the new password you've just created is strong enough to defeat a brute force attack, simply click on the "Check" button. After a short time, the application will display the combination of words you used to generate the password. If the combination matches a password stored in the Password Safe, the application will alert you and ask if you want to add the new password to your data. In addition to the main window, Password Safe contains a number of sub-windows that give more details about your saved passwords. First of all there is a window listing all of the saved passwords, with a list of the time when each password was created, and an option for editing or deleting each password. If you would like to generate new passwords for web site logins, there is a password generator window. To use this window, simply click on the "New Password" button. In order to quickly search through your passwords, you can use the "Search" window. This window gives you the option to search either a specific field in your data, or all the fields of your data. The fields are: username, password and date of the password. For those using an encrypted file format, a screen will display the password file's fingerprint. For those using a binary file format, a screen will display the file's hash fingerprint. For those using the password generation feature, a list of the words you entered in the password generator window will be shown. For those using the password editor, a screen will be displayed giving you the option to edit any of the stored passwords. You can search for the email address you used to create your account. Any changes made to your passwords will be automatically saved in the secure data file. There is also a settings window which you can use to change the application's default options. Or if you are an advanced user, there is a very detailed help window available. Key Features: Keywords:
