1. Field of the Invention The present invention relates to a device and method for testing a component, especially a device and method for testing a component integrated in an integrated circuit. 2. Description of the Related Art FIG. 1 is a schematic cross-sectional view illustrating a device and method for testing an integrated circuit (IC) incorporating a component, according to the prior art. Referring to FIG. 1, the device and method for testing the integrated circuit according

---

to the prior art includes an integrated circuit 10 and a testing device 20. The integrated circuit 10 is integrated on a semiconductor chip 11 and includes a plurality of input/output pads 13. The testing device 20 includes a test head 22, a probe card 24 and a pre-amplifier 26. During testing, the testing device 20 is assembled to the integrated circuit 10. The test head 22 provides signals to be input to and output from the integrated circuit 10 through the probe card 24. The probe card 24 is generally in the form of a printed circuit board, and includes a plurality of probes 25 for contacting the integrated circuit 10.

---

The probes 25 are attached to the probe card 24 at corresponding positions.

Each of the probe cards 24 and probes 25 are electrically connected to the pre-amplifier 26. During testing, a predetermined test signal is input to the probe 25 through the probe card 24, and the plurality of input/output pads 13 of the integrated circuit 10 respectively correspond to the probe 25. Then, the test signal transmitted by the probe 25 is received by the integrated circuit 10 through the input/output pads 13, and thereby the integrated circuit 10 is tested.

However, with the device and method

---

for testing the integrated circuit 10 with the above-mentioned configuration according to the prior art, the integrated circuit 10 has to be tested one by one. That is, the probe card 24 is needed to be replaced for testing the integrated circuit 10.

Furthermore, when the integrated circuit 10 fails to be tested, the whole testing device 20 has to be discarded.

Therefore, the whole testing device 20 is bulky and costly to manufacture.

Therefore, there is a need for a new and improved device and method for testing an integrated circuit

that they were responsible for the attacks, and said that they were only sent information as part of their normal duties. To add at the last minute, the Army Personnel Directorate has denied that they were responsible for the attacks, and said that they were only sent information as part of their normal duties. Rabale, the grandson of Ahmadabad Trigarbhai Neemchand, spoke of his family tree. “My grandfather was originally from Jafaria, and lived in Surat during the 1940’s,” Neemchand told journalist Jyoti on e-mail on Tuesday. “The family moved to Ahmedabad during the 70’s, and

---

shortly after that, they moved to Gadhada. “My father, his brother and their father were born there, and my mother was born in Mangrol. My father’s brother, Viraj, and his mother died when my father was a child.”

Neemchand, a graduate of Ahmedabad University, and a Mechanical Engineer with the Gujarat Energy Development Corporation, was describing his family history at the time of the attacks. “The attacks took place on my parents’ 20th Wedding anniversary,” he said. “They were killed along with my cousin Saima, who was also in a wedding party, and my uncle Shamsuddin, his

wife and daughter, Muni. “The rest of the team was killed during the police firefight. My other uncle, Shahid, also died of injuries sustained in the firefight.” “This was the only family that did not return to Gadhadra,” he said. “My brother and I stayed with my father’s family in Mangrol, and we all moved to Ahmedabad once more. I have been here all my life.” Viraj, Neemchand’s brother, told journalists in Ahmedabad that his father, Surendra, and his mother, Hadipali, died in the attacks. “Our father was an army officer,” he said. ◆
