+0000PlantUML is a lightweight Windows application whose purpose is to help users design UML diagrams using a description language. It supports: JAVA, HTML, C, C++, Y, plain text and others. The tool provides facilities to create Sequence, UseCase, Class, Activity, Component, State and object diagrams. The Description language is supported in a dedicated pane, as well as via

Import, which is used for importing data from the following file formats: JAVA, HTML, C, C++, Y, plain text and others. Keyboard shortcuts help you to: 1) Open the Description pane. 2) Export an SVG file of a diagram. 3) Delete a diagram from the memory. 4) Show the list of diagrams. 5) Open the Documentation. 6) Change the diagram format from PNG to SVG. 7) Uninstall the program. 8) Turn the program on or off. 9) Go to the Help. PlantUML sports

a clean and intuitive layout that offers only a few configuration settings to tinker with. The tool gives you the possibility to insert the description language in a dedicated pane, or import data from the following file formats: JAVA, HTML, C, CPP, Y, plain text, and others. What's more, you can create sequence, use case, class, activity, component, state, or object diagrams, and save the generated diagram to PNG or SVG file format. Since it doesn't require much computer

knowledge to work with this tool, even rookies can set up the dedicated parameters with minimum effort. During our testing we have noticed that PlantUML carries out a task very quickly, offers very good image quality, and no errors showed up throughout the entire process. It doesn't put a lot of stress on CPU and memory, so the overall system performance is not burdened. To sum things up, PlantUML offers an intuitive layout for helping users design

UML diagrams via a description language. Of course, if you are not accustomed with writing description language statements, then it may prove to be pretty difficult to carry out the process. The Description language is supported in a dedicated pane, as well as via Import, which is used for importing data from the following file formats: JAVA, HTML, C, C++, Y, plain text and others.
