Q: How to Convert an Int64 to Int16 I have a value Int64 ft = 0x0000000000000000BD0000007000000B I know that this is actually set by the long string of hex values at the beginning of the URL. How can I convert this to a 16 bit signed integer? This is what I've got right now: Int16 id = Convert.ToInt16(ft.ToString("X")); However, this converts to an integer of value 4294967267 (a decimal of -3142 in hex). I believe this is due to the leading zeros, but I am not exactly sure. A: I believe you've misunderstood the size of the number. 0x00007FF7A00000000BD0000007000000 is a 64-bit integer, aka long. To get a 16-bit integer, just change the last two 0x00 to 0x7F: 0x00007FF7A00000000BD007F0000007000000 EDIT: 0x00007FF7A00000000BD007F0000007000000 is a 32-bit integer, aka short. A: To get the correct number of bits, just convert this: 0x00000000000000000BD0000007000000B to hex: 0x00000000000000000BD00000070000000 Now it should be obvious how to do the actual conversion: 0x00000000000000000BD00000070000000 >> 16 which gives: -3646547 You can test it with: Int16 id = Convert.ToInt16(FloatToShort(Convert.ToDouble(0x00000000000000000BD0000007000000B))); Neuromuscular dysfunctions in a case of giant cell arteritis. A 25-year-old man presented with excessive jaw-closing force and progressive tetraparesis. The neurologic examination was unremarkable except for a significantly decreased jaw-closing force. Electromyographic examination showed a positive sharp waves of the lower jaw muscle bilaterally and multiple motor units of various sizes in the thigh muscles. Magnetic resonance imaging of the pelvis and lumbar spine demonstrated enhancement in the thoracic aorta, supporting the diagnosis of giant cell arteritis. A decompression laminectomy was performed to relieve nerve compression. The symptoms and signs significantly improved with corticosteroid treatment
