Layers: Layers are used to combine elements in an image to create new image documents. In Photoshop, layers are stacked in order. Keyboard shortcuts: You can use the keyboard to perform basic tasks that are generally faster than using the mouse. The menus: Selecting the menu commands brings up a menu. 1. Technical Field The present invention relates to a light-emitting device, and a method of producing the light-emitting device. 2. Related Art In the related art, as a light-emitting device of this type, a light-emitting device including a light-emitting element which includes a plurality of light-emitting portions and which is formed by stacking films, electrodes, and connection portions which connect the electrodes is known. The light-emitting device has the plurality of light-emitting portions which include a light-emitting element which emits blue light, a light-emitting element which emits green light, and a light-emitting element which emits red light, and the light-emitting device can be used as a light source for a full-color display. In particular, a method of manufacturing a light-emitting device of this type which has a high light extraction efficiency and a high mounting strength is proposed in JP-A-2007-207050. However, in the related art, in a light-emitting device including the plurality of light-emitting portions which include the light-emitting element which emits blue light, the light-emitting element which emits green light, and the light-emitting element which emits red light, the vertical distance between the electrode connected to the light-emitting portion which emits blue light and the light-emitting portion which emits green light is different from the vertical distance between the electrode connected to the light-emitting portion which emits green light and the light-emitting portion which emits red light. Therefore, in the related art, there is a problem in that it is not possible to efficiently extract blue light from the blue light-emitting portion. However, if it is possible to efficiently extract blue light from the blue light-emitting portion in a light-emitting device including the plurality of light-emitting portions which include the light-emitting element which emits blue light, the light-emitting element which emits green light, and the light-emitting element which emits red light, it is possible to achieve high brightness, high luminance, high energy efficiency, and the like. \\(hep-th\\). Pages March 23, 2015 Famous Celebrities You Would Never Think Are Vegetarians Once in a while, you would notice celebrities wearing a leather jacket and eat a steak. What you don't realize is that they are actually vegetarians! 1. Gwyneth Paltrow She's known for being a vegan and shying away from meat and fish. She's pretty vocal about her pro-vegan views, so we can't blame her for associating herself with those sentiments. 2. Adriana Lima She works with a vegetarian gym but is not a vegetarian herself. Many celebrities are perplexed by this, but she's definitely not an animal-abuse advocate. She sees no reason not to eat meat. 3. Kristen Stewart She was spotted eating some delicious cake and was seen taking a photo of the meal with a phone. She loves ice cream and enjoys cheesecake, so we guess she is fine with eating meat. 4. Michael Fassbender This is another convincing vegetarian. Michael's mom is a vegetarian, and he supports that belief. He's known to eat locally sourced and organic foods. He was even featured on the cover of a local vegetarian magazine in France. 5. Tom Hardy He's got the crazy short haircut and he works out. He's also an animal rights activist. He once described himself as a 'vegetarian/not vegetarian'... Hmm... I'd say he's pretty thin-skinned. 6. Emma Watson This lass has always been a vegetarian and a vegan. She even has a vegan popsicle stand. We wonder
