Although this program is free, in the sense that there is no monetary incentive for supplying the program with free updates, it is a commercial product in the sense that it carries advertising. This requires that the program should be downloaded from the Internet or sent to you by e-mail every time there is a software update. Moreover, the version of the program that I have is not compatible with Windows 8. As far as this program is concerned, it is simple and highly accessible. It allows you to set the time of the scan and the days on which you want to view uptime and which user you want to view uptime information. Our evaluation: - PC usage timer - a quick and easy program that displays the exact usage of computer on the selected day - Users can view uptime on the computer for the following days: - 1 day - 1 week - 1 month - 1 year - Last 24 hours - Last 48 hours - Last 4 days - Last 7 days - Last 30 days - Last 365 days - Save the lists of logged users - Reset the PC startup schedule - Password-protected PC startup logs - Shows only uptime of the selected user (select the user on first startup) - Show CPU and RAM - Time calculations and data display - Show only uptime of user logged on the computer - Automatic scheduled time of the scan - User-friendly interface - Free Performance evaluation and conclusion After the installation is completed, we tested this program and found it very simple to use and very responsive in displaying the desired result. Computer Usage Timer [Latest 2022]

Coincidentally, the version I have been using is the 1.2.2 version, released on October 20, 2011. The latest version is 1.4.0, which has been released on July 26, 2012. The program should therefore be regularly updated to fix bugs and implement new features. System Requirements: Windows XP/Vista/7/8/10. Free computer space is 50 MB minimum. The installer can be downloaded from this Web site. Computer Usage Timer Cracked Version is a simple-to-use program that shows the computer's total uptime on any day of the calendar. It does not include complex features or configuration settings, making it accessible to all types of users, regardless of their level of experience with computer software. Accessibility via the system tray The setup procedure does not take a long time to finish. At startup, Computer Usage Timer creates an icon in the system tray area which can be double-clicked at any time to get uptime statistics. Easily select a day to view uptime details All you have to do is navigate a basic calendar and just select a date to immediately view uptime information, namely start and end time, total duration, and logged user. Secure the program with a password Each PC startup is recorded separately. In addition, you can view only logs based on a particular user. As far as app settings are concerned, it is possible to password-protect Computer Usage Timer to restrict the access of other users to it. Evaluation and conclusion We have not come across any unpleasant surprises in our tests, since Computer Usage Timer was stable. It has a good response time and shows accurate information. CPU and RAM consumption is very low. Since it sits quietly in the system tray area, it does not interrupt normal user activity. The only problem with Computer Usage Timer is that it has not been updated for a very long time, and it is not compatible with later Windows versions. Otherwise, its basic set of options would have made it a must-have tool for users who want to keep track of their workstations' uptime.
