This guide will show you how to edit in Photoshop Elements. 1. What are Photoshop Elements? You will not find Photoshop Elements at the Apple App Store. It is only available to download from Adobe's website. It is a free alternative to Adobe Photoshop and most people use it because it has most of the features of Photoshop but with fewer features and a simpler user interface. When you open Photoshop Elements, you will see tabs at the top of the window: Edit, Adjust, Create, Arrange, and Download. The Edit tab contains icons for most basic editing functions: Red eye remover Red eye remover This tool enables you to remove the red eye that forms around the pupils of your subject's eyes when you use a flash. It's easy to use, the red eye remover tool is controlled by two sliders. The top slider controls the brightness of the eye and the bottom slider controls the saturation of the eye. Adjust these sliders until you find a balance. This tool enables you to reduce the contrast of an image, simulating an older photograph or painting. To reduce the contrast, simply drag the slider bar from black to white. One-click Bleach One-click Bleach The image in this example shows a room with a spectacular view. The view is blocked by a chair so the sunlight comes through a different window at the side of the room. The window on the side of the picture is just a little bit overexposed and looks white. To fix this, use the Spot Healing Brush tool to select the overexposed window. One-click the Spot Healing Brush tool or hold down the Shift button to "capture" the current selection. For best results, match the layer styles of your source photos. For example, if your portrait is a little dark, it might not be an accurate representation of the real scene. You can do this in Photoshop using the Gradient tool. Select the Gradient tool and choose Linear from the drop-down menu. Select one of the four pre-styled gradient options. Select a fill or background layer. Select a source layer. Drag the source

The NWS itself predicted 3.1 inches of rain in New Orleans, which is accurate according to weather models. But the NWS is one of many sources of weather information in this city, and sometimes its predictions aren't correct. Here are several storms that caught us completely by surprise, according to members of the Weather Underground. Rainfall due to a thunderstorm that picked up over the Gulf Coast during the Tuesday evening storm system, centered over Mississippi and Louisiana, is sweeping up into New Orleans and its suburbs. The National Weather Service says the storm could be responsible for a half-inch of rain in this area. Meteorologist Greg Diamond says the action responsible for the rainfall is at this time associated with a meso-scale cyclone over the western Gulf of Mexico.
