Below is my test: describe('', () => { it('renders empty input tag and prepends file input', () => { const input = shallow({}} />); expect(input.find('input[type="file"]')).toHaveLength(1); }); }); It passes but it fails to catch the required values by checking to have length. Q: Como obter o valor de um atributo quando houver mais de uma div usando jQuery? Supondo que eu tenha o seguinte HTML Como faço pra obter o valor de atributo title sem ter que usar um for? Meu ideal seria ter algo como: var valor = $('[title]').attr('title'); A: Use.map() para iterar o objeto jQuery e utilizar o método attr('title') para pegar o valor. Exemplo: var valor = $('[title]').map(function() { return this.title; }).get(); Se você precisar de combinar os elementos, use.get() depois do map, e depois.push() os elementos num array: var valor = $('[title]').map(function() { var title = this.title; return [title]; }).get().push($('[title]')); A: Para buscar o valor do atributo title basta utilizar o seletor de elementos jQuery para selecionar um ou mais elementos do tipo title, use o método attr do objeto jQuery e a variável obtido para exibir o valor. $('[title]').each(function () { console.log(this.title); // console.log(this.title); }); 1 2 3 4 5 6
