For example, I have this type of values 1. 7 2. 8 How do I code in c# the following: Do not print anything if it is null? I tried this code, but it is not working String s1 = "7"; String s2 = "8"; String s3 = ""; if (s1!= null && s2!= null && s3!= null) { Console.WriteLine(s1 + " " + s2 + " " + s3); } A: try this: String s1 = "7"; String s2 = "8"; String s3 = null; if (s1!= null && s2!= null && s3!= null) { Console.WriteLine(s1 + " " + s2 + " " + s3); } else { Console.WriteLine(null); } It's been one, two, three years since the last Disney Infinity release. Thanks to Disney, we have new Star Wars figures (and the chance to break them out again). But for fans who are still awaiting the next wave, a new deal between Disney and Hasbro has given them a gift - the release of a brand new play set! The new playset, which can be purchased separately or as part of a bundle with Character Spotlight figures, will be Star Wars: The Resistance. Set in the Star Wars galaxy, this playset includes characters like Poe Dameron and Finn as well as ships like the Resistance X-Wing and the TIE Bomber. You can download the game right now if you've got a decent internet connection, or the game is scheduled to release on October 7. The Disney Infinity Toy Box collection has also received a new update with Star Wars characters for "all Disney Infinity game platforms". In other news, Minecraft Xbox 360 players will soon be able to use their favourite Star Wars characters in their own Lego-style worlds. Thanks to the new deal, any character in the Disney Infinity line will be available on Xbox 360 for a limited time.

key activation the .Q: Einstein-Schrodinger equations in spacetime M_2
 $\times R$ I was reading the paper It seems to me that the classical limit
 $\epsilon \rightarrow 0$ of the author's semiclassical expansion is the
expected classical limit of the Einstein-Schrodinger equations. But I have
some questions: (a) I do not understand what he mean by $M_2 \times$
 R , where M_2 is his initial M . (b) He takes the ϵ
 $\rightarrow 0$ limit of the Einstein-Schrodinger equations which I
understand. But he then puts the EDS equations in a space-time M_2
 $\times R$ which is not the same as the full M_2 he used to solve the
EDS equations in the first place. (c) It is clear to me that the ϵ
 $\rightarrow 0$ limit of the semiclassical expansion looks like a classical
limit for the EDS equations, because the classical limit of the quantum
equations is the classical field equations. But the paper says that it is not
the classical limit of the EDS equations. The problem is that I am
confused about how he does the semiclassical expansion and how he
gets his equations.
