Drive Full Screen is a
simple technique for
managing your desktop
images using a global

hotkey. Imagine the scenario: you are working on a PDF and suddenly you realize you are not seeing the whole document. You start looking for the area of the screen that could be responsible for the missing part, but you can not find it. By accident, you hit the Shift+Enter combo which allows you to switch to the full screen mode. Then you focus on

the wrong window and believe that you are done with the task, but you are not. The Shift+Enter combo actually keeps the window you were already in, but it opens a new full screen window so you can continue to work. The Shift+Enter combo is a realtime hotkey, so you can set it to any combo and it will work correctly regardless of the size of your screen. Do not be

fooled by the Shift+Enter shortcut, it is not so simple as it sounds. The Shift+Enter hotkey is the perfect tool for managing desktop images using a global hotkey. By using it, you can focus on the correct window for your task and do not have to go back and forth between the desktop manager and the work area. How to use the Shift+Enter hotkey To set this hotkey, go to the

Hotkeys tab > Global > Full Screen. You can use any of the hotkeys you already use for the Desktop manager. If you use Windows 10, you can use the Shift+Enter hotkey as a global hotkey, regardless of the
